```
#Data----
revenue <- c(14574.49, 7606.46, 8611.41, 9175.41, 8058.65, 8105.44, 11496.28, 9766.09, 10305.32, 14379.9
expenses <- c(12051.82, 5695.07, 12319.20, 12089.72, 8658.57, 840.20, 3285.73, 5821.12, 6976.93, 16618.6

# Question----
# Find the:

# 1) Profit for each month
# 2) Profit after tax for each month (30% tax rate)
# 3) Profit margin for each month - equals to profit after tax divided by revenue
# 4) Good months - where the profit after tax was greater than the mean for the year
# 5) Bad months - where the profit after tax was less than the mean for the year
# 6) The best month - where the profit after tax was max for the year
# 7) The worst month - where the profit after tax was min for the year

# Stipulations:

#1) All results need to be presented as vectors
#2) Results for dollar values need to be calculated with $0.01 precision, but need to be
#   presented in units of $1000 with no decimal points.
#3) Results for the profit margin ratio need to be presented in units of % with no decimal
#   points.

# Profit for each month----

profit <- revenue - expenses
print(as.integer(profit))
